

The Braden Hester Pressure Injury Prevention Program

2.5 million hospital-acquired pressure injuries occur in the U.S. each year, and 60,000 lives are lost as a result of pressure injuries. Costs to treat pressure injuries are significant to both health care institutions and patients, costing an average of \$25,200 per episode.

The Braden Hester Pressure Injury Prevention Program elevates your pressure injury prevention strategy using the new Braden Scale II©, Standardized Pressure Injury Prevention Protocol (S-PIPP) aligned care plans, and full coaching support. Whether you are pursuing Magnet or Pathways, addressing a recent finding, or simply improving quality, this solution delivers measurable impact and expert guidance every step of the way.

HD Nursing is an evidence-based safety solutions company. We are dedicated to improving patient safety and injury management across the continuum of care.

Key Program Elements:

Predict

Use the Braden Scale II©, recently updated with enhanced interrater reliability, to determine if your patient or resident is at risk for a pressure injury and identify modifiable risk factors to drive care planning.

Prevent

Use individualized interventions from the Braden Hester PIP Care Plan© to help prevent pressure injury.

Sustain

Get support from resources in the Braden Hester PIP Playbook© and the HD Nursing coaching team, and use data to leverage your efforts with support from the HD Nursing Intelligence platform and our Data Team.
