

HD Nursing®

Putting Science & Technology to Work

The Braden Hester Pressure Injury Prevention Program

HD Nursing is an evidence-based safety solutions company.

We are dedicated to improving patient safety and injury management across the continuum of care.

The Braden Hester Pressure Injury Prevention Program[®]

An Evidence-Based Approach to Pressure Injury Prevention

Patient Safety Solutions

Acute Care
Braden Scale[®]
Braden Hester PIP Care Plan[®]
Braden Hester PIP Toolkit[®]
BH ICU Bundle[®]

Long Term Care, Assisted Living
and Home Health
Braden Scale[®]
Braden Hester PIP Care Plan[®]
Braden Hester PIP Toolkit[®]

Predict-Prevent-Sustain

Predict

Use the Braden Scale[®] to determine if your patient/resident is at risk for a pressure injury.

Prevent

Use the Braden Hester PIP Care Plan[®], Interventions, and Bundles to help prevent pressure injury.

Sustain

Use the Braden Hester PIP Toolkit[®] and SenseAi[™] Data Analytics to sustain program success.

Assessment and Care Planning

The Braden Scale[®] is the most widely used pressure injury risk scale used today.

Barbara Braden teaches us that “each subscale score serves as an initial appraisal of a patient’s specific problems and functional deficits, a flag for assessments that need to be explored further, and a guide to the types of interventions that may be required.”

With Braden Hester PIP, the pressure injury risk factors are mapped to specific interventions in the Braden Hester Care Plan[®] creating efficiency and ability to measure effectiveness of the interventions.

Pressure Injuries Today

According to AHRQ

Pressure injuries increased 6% from 2014-2017

2.5 million hospital acquired pressure injuries (HAPI) occur annually in the US

Cost to treat a HAPI ranges from \$500 to \$70,000

60,000 deaths are reported annually related to HAPI

SenseAi™ is our analytical software designed to help you “*Make Sense of Your Data*”.

The program compliance data you submit is securely stored and analyzed within the SenseAi™ engine, providing you with the data you need to drive decisions and communicate the status of your patient safety program.

Your team will submit assessment and program audits into the on-demand SenseAi™ portal. You can then review the detailed reports at the unit level, facility level and system level at any time.

The audit information will help you track your organization’s current and historical performance and boost efficiency efforts by directing your team to incorporate education tools that target opportunities for improvement as identified in the audits and post-fall huddles.

The security of your data is important. SenseAi™ is accessed by designated individuals through your unique login to view organization specific data. Our system is secured with Azure security management. No patient information is entered into this system.
